

**International
Summer
School**
on Biotechnology

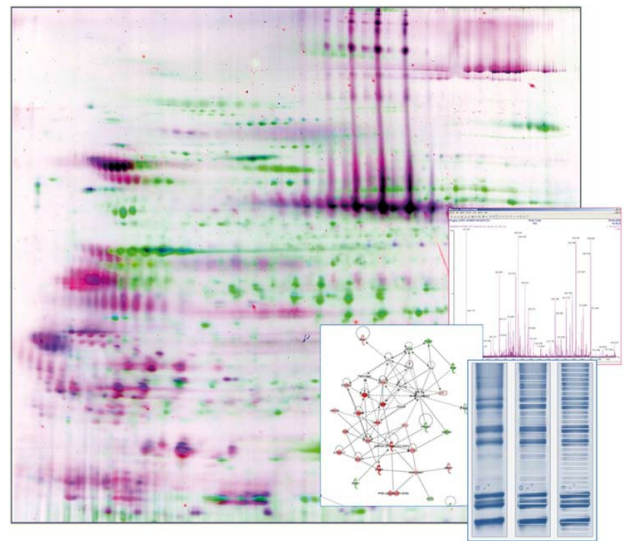

Basic course *Electrophoresis for Proteomics*

**July 7-11, 2014
Alghero, Sardinia
Italy**

The course is designed to give researchers a thorough basis to understand the new trends in protein expression analysis by means of gel-based proteomics, and to enable young scientists to evaluate how useful these techniques are to their own research and how to apply them effectively. In accordance with the HUPO/ EuPA guidelines, we aim to:

- Provide a theoretical basis for gel-based proteomics
- Illustrate how the techniques are being applied in modern proteomics studies
- Help students to design their own experiments
- Provide practical instruction in laboratory techniques
- Provide extensive tutorial/discussion sessions

Lectures by:

Peter James

Reiner Westermeier

Guenter Thesseling
