

Mouse Modeling at IGB - ABT, CNR

We are pleased to announce that the Institute of Genetics and Biophysics “Adriano Buzzati-Traverso” has open two new facilities, the first run a service of Gene Targeting in Embryonic Stem (ES) cells, and the second microinjection into blastocysts and strain rederivation. The facilities are open to internal, external academic and non-academic users.

Microinjection & Strain Rederivation

Homologous Recombination in ES cells

Homologous Recombination & Microinjection Facilities
